

Oxymatic® Smart fascinates the public at Lyon Piscine Global with its integrated remote-control system.

The comments made by people on coming up to the stand were very enthusiastic in wanting to try out this product, which was just what they had been waiting for. It unites **ecology and automation in a unique system**, with all data available together “in the cloud”.

A REVOLUTION IN SWIMMING POOLS AND SPAS

- 100% ecological, chlorine-free
- Automated integrated pool manager
- Remote system via IOS, Android and PC

Improved performance for pool professionals!

On trying out its operation at the stand, the professionals were excited about the possibility to “download data from the cloud” in real-time, and to control the state of customers’ pools. **A pioneering system that monitors all the equipment settings gives greater control and makes it possible to act before any untoward incident can arise.** Remote operation gives them the power to deploy logistical resources better, and to provide more efficient customer service.

L' **Oxymatic® Smart** was exhibited not only at our own official stand, but was also demonstrated at the “pool Eco-Attitude” and “Nouveautés” area.

What really attracted the public's attention was the tester which, together with the mobile app, means **Oxymatic® Smart** has fully adapted to meet market trends in the world of intelligent mobile devices.

This major step forward can be expected to transform totally the way we regulate and manage swimming-pools, in that owners and responsables for maintenance will be able remotely to carry out checks and operate a range of functions and settings.

For the company, this international meeting resulted in numerous contacts who are promoting our expansion into other countries, opening up new markets and verifying that there is real interest in the sector in embracing eco-friendly systems of this type.
