

Great success for Oxymatic at Salon Piscina Barcelona, offering the best option for “eco-friendly” water treatment

The company **Hydrover** has managed to attract the attention of the visitors at the Barcelona International exhibition, by presenting **Oxymatic Swim**, its ecological water treatment system for swimming pools and spas.

The great interests of the visitors at the stand and the positive feedback received confirm that the public and the market is looking for an efficient and economical water treatment that also respects health and environment, totally in line with the philosophy of **Hydrover** systems.

The visitors could observe at firsthand that it is possible to keep pools clean **without using chlorine, salt or chemicals, and with low energy consumption.**

Many people applauded that "**finally there is a new system that does not use chemicals**" and that is truly "eco-friendly" providing a real alternative in the market for pool water disinfection.

Oxymatic® Swim

Hydrover, also exhibited **Oxymatic Drink**, the ecological water treatment for human consumption, which also aroused great interest in visitors.

Oxymatic Drink does not only fight the growth of bacteria, viruses or algae. Other organic impurities in the water are kept under control, so that disagreeable odors and unpleasant tastes disappear.

Oxymatic® Drink

During this international event, the company Hydrover observed that its system based on the disinfection and oxidation technology ABOT, has a great future in foreign markets and is very optimistic about the contacts made for the expansion of the systems.
